synaptic scaffolding protein S-SCAM - rat
C;Species: Rattus norvegicus (Norway rat)
C;Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 15-Mar-2004
C;Date: 21-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 15-Mar-2004
C;Accession: T14152
R;Hits, A., i Hate, Y.; Ide, N.; Takeuchi, M.; Irie, M.; Yao, I.; Deguchi, M.; Toyoda, A.
J; Biol. Chem. 273, 21105-21110, 1998
A;Title: A novel multiple PDZ domain-containing molecule interacting with N-methyl-d-asp
A;Accession: T14152
A;Accession: T14152
A;Accession: T14152
A;Accession: T14154
A;Residues: 1-1277 <HIR>
A;Residues: 1-1277 <HIR>
A;Residues: 1-1277 <HIR>
A;Cossion: Treferences: EMBL:AF034863; NID:g3411052; PID:g3411053; PIDN:AAC31124.1
C;Genetics:
A;Gene: S-SCAM
C;Punction:
A;Description: may assemble receptors and cell adhesion proteins at synaptic junctions
F;302-339/Domain: WW repeat homology <WW2>
F;348-385/Domain: WW repeat homology <WW2>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Novel peptide capable of binding to type I WW-domain of Nedd4 protein and useful for treating viral infections, comprises contiguous amino acid sequence of a viral protein encompassing PPXY motif.

The invention relates to a novel isolated peptide comprising a contiguous amino acid sequence of 8-30 amino acid residues of a viral protein, where the contiguous amino acid sequence encompasses the PPXY motif of the viral protein and the peptide is capable of binding at type I WW-domain of the Nedd4 protein. A peptide of the invention has virucide activity, and arcs as an inhibitor of viral budding and virus propagation. The peptides are useful in the manufacture of a medicament useful in the treatment of viral infections caused by a virus selected from hepatitis B virus and human hepps virus 1. The peptides are also useful for inhibiting viral budding from virus infected cells and thus inhibiting virus propagation in the cells. The present sequence represents a peptide of the invention.

The present sequence is the Smad PY motif consensus sequence. The PY motif binds to the WW domain of HBCT (homologous to B6 carboxyl terminus) E3 ubiquitin ligase. resulting in ubiquitination of Smad by the E3 ubiquitin ligase. The sequence is provided in a specification relating to a method for screening for agents that modulate transforming growth factor (TGF)-beta and/or bone morphogenic protein (BMP)-mediated bignalling. The method involves evaluating the effect of an agent on binding of HECT E3 ubiquitin ligase W domain to Smad PY motif, on the callular ubiquitination of Smad protein by E3 ubiquitin ligase, or on the callular cavels of Smad protein hECT E3 ubiquitin ligase activity. The method is useful for stimulating bone formation in a patient or treating a condition associated with insufficient TGF-beta and/or BWP-mediated cell cignalling. Agents that inhibit BWP-mediated signalling are useful for signalling are useful for stimulating bone that unwament BWP-mediated signalling are useful for stimulating bone anabolism as well as treating broken bones, osteoporosis, and acute or chronic renal failure. Agents that inhibit TGF-mediated signalling are useful for treating energy, inflammation, neurodegeneration and fibrosis
                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Screening for modulators of TGF-beta and/or bone morphogenic protein (BMP) mediated signaling useful for treating cancer and osteoporosis by evaluating the ability of agents to modulate Smad protein degradation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated peptide comprising a contiguous amino acid sequence of 8.30 amino acid residues of a viral protein, where the contiguous amino acid sequence encompasses the PPXY motif of the viral protein and the peptide is capable of binding at type I WW-domain of the Nedd4 protein. A peptide of the invention has virucide activity, and acts as an inhibitor of viral budding and virus propagation. The peptides are useful in the manufacture of a medicament useful in the treatment of viral infections caused by a virus selected from hepatitis B virus and budding from virus. I. The peptides are also useful for inhibiting viral budding from virus infected cells and thus inhibiting virus propagation in the cells. The present sequence represents a peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel peptide capable of binding to type I WW-domain of Nedd4 protein and useful for treating viral infections, comprises contiguous amino acid sequence of a viral protein encompassing PPXX motif.

The present invention relates to novel compositions comprising peptides (ADK83300-ADK89584) from 191P4012(b) and related proteins. It was found that 191P4012(b), which maps to chromosome 1422-423.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humonral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; parcers acancer; cancer; breast cancer; uterus cancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.
                                                                                                                                                                                                                                                                                                                New composition comprising 191P4D12(b) proteins and polynucleotides, useful in diagnosing, preventing and treating cancer, e.g. prostate, bladder, kidney, colon, lung, pancreas or ovary and in eliciting a humoral or cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (ADK83300-ADK90584) from 19194D12(b) and related proceins. If was found that 19184D12(b), which maps to chromosome 1q22-q23.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; Immunostimulant; Vaccine; Gene Therapy, 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; pancer; cancer; pancer; or cancer; breast cancer; uterus cancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.

                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                 ő
                                                                                                                                                   The present invention relates to novel compositions comprising peptides (ADK83300-ADK90584) from 191P4D12(b) and related proteins. It was found that 191P4D12(b), which maps to chromosome 1q22-q23.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overxpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA

The present invention relates to novel compositions comprising peptides (ADK83300-ADK90584) from 191P4012(b) and related proteins. It was found that 191P4012(b), which maps to chromosome 1422-423.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel compositions comprising peptides (ADK83300-ABK96584) from 19194012(b) and related proteins. It was found that 19194012(b), which maps to chromosome 1022-q23.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overapressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA

The present invention relates to novel compositions comprising peptides (ADK83300-ADK99584) from 191P4D12(b) and related proteins. It was found that 191P4D12(b), which maps to chromosome 1922-923.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA
                                                                                                                                                                                                Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; parcers cancer; oancer; parcer; cancer; uterus cancer; cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful in diagnosing, preventing and treating cancer, e.g. prostate, bladder, kidney, colon, lung, pancreas or ovary and in eliciting a humoral or cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    composition comprising 191P4D12(b) proteins and polynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 28; DB 8; I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel compositions comprising peptides (ADK83300-ADK90584) from 191P4D12(b) and related proteins. It was found that 191P4D12(b), which maps to chromosome 1922-921.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are oversybressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA

The present invention relates to novel compositions comprising peptides (ADK83300-ADK90584) from 191P4012(b) and related proteins. It was found that 191P4012(b), which maps to chromosome 1922-431.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in aliciting a humoral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA derived from prostate cancer tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; parcers, cancer; cancer; parcers, cancer; or cancer; immune response; human; chromosome 1q22-q23.2; suppression Subtractive Hybridisation; SSH.
                                                                                                                                                                                                                                              New composition comprising 191P4D12(b) proteins and polynucleotides, useful in diagnosing, preventing and treating cancer, e.g. prostate, bladder, kidney, colon, lung, pancreas or ovary and in eliciting a humoral or cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 28; DB 8; Length 9;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to novel compositions comprising peptides (ADK89300-ADK90584) from 191P4D12(b) and related proteins. It was found that 191P4D12(b), which maps to chromosome 192-93.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overxpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA
                     lung cancer; pancreas cancer; ovary cancer; breast cancer; uterus cancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; pancers ancer; oancer; cancer; uneras cancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.

                                                                                                                           The present invention relates to novel compositions comprising peptides tho ADMS036491 from 191P4D12 (b) and related proteins. It was found that 191P4D12 (b), which maps to chromosome 1q22-q23.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridiaation (SSH) method was used, using cDNA derived from prostate cancer tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; Immunostimulant; Vaccine; Gene Therapy, 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; pancer; oancer; oancer; oancer; oancer; oancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel compositions comprising peptides (ADK843300-ADK96584) from 191P4D12(b) and related proteins. It was found that 191P4D12(b), which maps to chromosome 1q22-q23.2, is aberrantly expressed in a number of cancers and so the compositions of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
New composition comprising 191P4D12(b) proteins and polynuclectides, useful in diagnosing, preventing and treating cancer, e.g. prostate, bladder, kidney, colon, lung, pancreas or ovary and in eliciting a humoral or cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful in diagnosing, preventing and treating cancer, e.g. prostate, bladder, kidney, colon, lung, pancreas or ovary and in eliciting a humoral or cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     composition comprising 191P4D12(b) proteins and polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                .;

It was found that 191P4D12(b), which maps to chromosome 1q22-q23.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the Suppression Subtractive Hybridisation (SSH) method was used, using cDNA derived from prostate cancer tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; in thing cancer; parcer; cancer; parcer; cancer; uterus cancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.
are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pancreas, ovary, breast, uterus or cervix and in eliciting a humoral or cellular immune response.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1

Sequence 156 Application US/09314268

Patent No. 6346377

GENERAL INFORMATION:

APPLICANT: DOORDAY.

TITLE OF INVENTION: INFOVEMENTS IN OR RELATING TO SCREENING FOR PAPILLOMA
TITLE OF INVENTION: VIRUSES

FILE REFERENCE: 3789/80902

CURRENT APPLICATION NUMBER: US/09/314,268

EARLIER FILING DATE: 1999-03-19

EARLIER FILING DATE: 1999-05-18

EARLIER FILING DATE: 1999-05-18

SEALIER FILING DATE: 1999-05-18

SOFTWARE: PATENTIN UND: 179

SEQ ID NOS: 179
